VELMONT UNIVERSITY

Tuition and cost planning

Planning information - not an approved catalog or institutional policy.

Proposed university in development. Planned first enrollment: Fall 2029, subject to required approvals and launch readiness. Admissions are not currently open.

Plan for tuition and other study expenses.

Planned tuition is $45,000 for a 120-credit bachelor's degree and $20,000 for a 36-credit master's degree. These amounts cover tuition only. Mandatory fees, materials, required tools and other expenses will be listed separately as they are established. The published figures are planning amounts, subject to final institutional approval.

Planned tuition by degree level

Degree level	Credits	Planned tuition only
Bachelor's	120	$45,000
Master's	36	$20,000

Tuition only. Additional expenses are not included. The bachelor's planning amount is equivalent to $375 per credit; billing arrangements and the treatment of accepted credit will be published when finalized.

What total study cost may include

Bachelor's students should plan for the time and any location-related expenses associated with the required internship. The university will publish applicable requirements and costs as partner arrangements are finalized.

Program tuition

Bachelor's: $45,000 for 120 credits. Master's: $20,000 for 36 credits. Planning tuition only, subject to final institutional approval.

Mandatory fees

All required fees should be shown alongside tuition, rather than discovered later. Amount not yet determined.

Materials and required tools

Required books, learning materials, software or tools should be identified if applicable. Amount not yet determined.

Technology and assessment costs

Any necessary technology, assessment, evaluation or proctoring charges should be explained if applicable. Amount not yet determined.

Internship-related expenses

Possible travel, checks or site-specific expenses, if applicable, remain to be determined. An unpriced expense should not be assumed to be zero.

The full cost and payment picture

What is due, and when?

Velmont will organize study in semester terms. Payment schedules, installment options, withdrawal and refund terms are being developed. This preview does not accept payments. Semester terms do not establish a particular billing method.

Standard and individual completion planning

Accepted credit may affect remaining study; effects on duration and tuition depend on evaluation, sequencing and final billing policy.

Explore scholarships and funding options.

Velmont plans to provide financial guidance to help students understand tuition, other study expenses and established funding opportunities. Scholarships, grants, employer education benefits and payment arrangements will be explained as their availability and terms are confirmed.

What is established and what is proposed?

Financial guidance

The planned Financial Services office would help students review charges, payment timing and available funding information.

Scholarships in development

Award names, funding, amounts, eligibility, application dates and renewal requirements are being developed. No award is currently offered through this preview.

Funding sources and availability

Federal and state student aid

Federal and state student-aid eligibility has not been established. Students should not assume these sources will be available for the first cohort. Verified eligibility information will be published when available.

Loans and payment plans

No loan or payment plan is offered through this preview. Borrowing requires careful review of repayment terms and eligibility.

Employer education benefits

Students may wish to ask their employer about existing education benefits. Velmont-specific employer partnerships and reimbursement arrangements will be announced only when established.

Installment options in development

Payment arrangements are being considered. Availability, due dates, charges and eligibility will be published if a plan is adopted.

Understand an offer before you accept.

Check the amount, eligibility conditions, covered period, renewal rules and whether funding can be combined. Scholarships and grants differ from loans, which must be repaid. Employer reimbursement may arrive after tuition is due. A funding estimate is not an award.

Eligibility, compatible funding and net cost

Eligibility, permitted funding combinations and the expenses covered must be confirmed for each offer. Net cost depends on actual charges and confirmed awards; loans remain repayable.
